

# ORDER STATISTICS

Let  $X_1, X_2, \dots, X_n$  be iid continuous rvs with pdf  $f(x)$  and cdf  $F(x)$ . The **order statistics** of this random sample are  $Y_1, Y_2, \dots, Y_n$ , where

$Y_i =$  the  $i^{\text{th}}$  smallest value among  $X_1, X_2, \dots, X_n$ .

**MIN:**  $Y_1 = \min(X_1, \dots, X_n)$  has pdf  $g_1(y) = n[1 - F(y)]^{n-1} \cdot f(y)$

**MAX:**  $Y_n = \max(X_1, \dots, X_n)$  has pdf  $g_n(y) = n[F(y)]^{n-1} \cdot f(y)$

**$i^{\text{th}}$  Smallest:**  $Y_i$  has pdf  $g_i(y) = \frac{n!}{(i-1)!(n-i)!} [F(y)]^{i-1} [1 - F(y)]^{n-i} \cdot f(y)$
