

YAHTZEE INVESTIGATION

(b) goal:

IDEA: (1) Write a function that computes the avg. number of rolls for a specific n

```
def computeAvgRolls(n):
```

```
    # call rollYahtzee(n) 1000 times
```

```
    # return average of the 1000 simulated num. rolls
```

(2) Use a list comprehension to call your function for n from 2 to 20

```
vals = [computeAvgRolls(n) for n in range(2, 21)]
```
